ZENDELITY   COMMAND CENTER

HOSPITALITY SIMPLIFIED

Announcing Patrol, a safety and security solution designed for hospitality.

- Create, manage and monitor safety, security and emergency plans.
- Automatically alert management to issues and improve response time.
- Monitor compliance and support investigations with detailed reports.

Ottawa, Ontario, Canada: Zendelity is pleased to announce the general availability of Patrol, designed for cruise ships, hotels, convention centers and resorts. Owners and operators can leverage this mobile solution to create, monitor and report on detailed work plans across all aspects of safety and security. All activities are tracked and managed in real-time to improve the response time and reduce the potential for incidents. Patrol leverages RFID and QR codes to monitor checkpoints and eliminates the requirements for expensive hardware, making it simpler and more cost effective to monitor more points of interest.

> "Safety and security is a top concern in the hospitality industry, guests and staff are concerned for their safety. Should something happen, the results could be devastating. Owners and operators need to consider the implications not only to their guests and staff but also on their brand, occupancy and daily rate. They must have and be prepared to act, without delay. With the latest advancements in technology, Zendelity has transformed how you prepare and respond to safety and security incidents in hospitality." says Dave McCrady, Partner at Zendelity Corporation.

From after-hours security routes, to monitoring shut down procedures, to building automated emergency action plans, or equipment quality checks, Patrol can ensure you have the right person at the right place at the right time.

- Create patrol routes to monitor all points of interest: High or low traffic areas, crime or hazard prevention, task verification or functional performance, etc.
- Create emergency tactical plans to ensure team members know exactly what to do in the event of an emergency.
- Monitor adherence to plan in real-time to ensure execution.
- Alert management in real-time to incidents or issues identified on route that need to be addressed.
- Monitor compliance and support investigations with detailed historical reports.

ZENDELITY

About Zendelity:

Command Center, from Zendelity, improves communications, safety, security and operational efficiency, to deliver a superior guest experience. It is a modular solution built on a single management platform that can evolve with our customer's priorities. Zendelity is an established vendor to many leading cruise lines helping them to differentiate from their competition and outperform. Through constant research and learning of current, legacy and not-yet-proven technologies, architectures and methodologies, Zendelity delivers cost-effective solutions that leverages the latest advancements yet still integrate with current infrastructure for improved investment protection. Zendelity is headquartered in Ottawa, Ontario. For more information about Zendelity, please visit www.zendelity.com.
